Objective

I am a passionate AI & ML Engineer with skills in Full Stack Web Development and Python programming. I have built real-time projects like an Instagram clone and rainfall prediction system. Skilled in Python, HTML, CSS, JavaScript, MongoDB, and experienced in ML model development. Also familiar with design tools like AutoCAD and Solid Vision.

Technical Skills

- Languages & Tools: Python, Java, JavaScript, MySQL, MongoDB, HTML, CSS
- Frameworks & Libraries: React.js, Node.js, Express.js
- Platforms & Tools: GitHub, VS Code, Render, Vercel, Postman, MS Excel, PowerPoint
- Concepts: Machine Learning, Deep Learning, Prompt Engineering, APIs, DSA, Data Annotation, Model Validation
- Design Tools: AutoCAD, Solid Vision, Vision 360

Work Experience/Internships

- **UPGRAD | Full stack developer Sep 2023 – April 2024**
 - Completed a 6-month intensive bootcamp; developed a fully functional Instagram clone using HTML, CSS, JavaScript, Python, and MongoDB. Gained hands-on experience in building and deploying full stack web applications.
 - Developed a fully functional Instagram-style social media web app using the MERN stack (MongoDB, Express.js, React, Node.js) during a Full Stack Bootcamp with upGrad.
 - The platform features user authentication (JWT), profile creation, image posting, liking, commenting, and responsive design.
 - I focused on clean user experience with real-time updates, dynamic post loading, and UI feedback during actions like liking or commenting.

Personal Projects/Awards & Achievements

- **INSTAGRAM CLONE USING MERN STACK ([insta-clone](#)) Jan 2024 - Apr 2024**
 - Developed a fully functional Instagram-style social media web app using the MERN stack (MongoDB, Express.js, React, Node.js) during a Full Stack Bootcamp with UpGrad.
 - Tech Stack: HTML, CSS, JavaScript, Python, and MongoDB, Render (backend) and Vercel (frontend)
- **RUMORS STANCE PREDICTION (minor project) Oct 2024 - Dec 2024**
 - Using advanced deep learning architectures such as LSTM and CNN, we can accurately analyze user-generated content.
 - Tech Stack: Python, MySQL, Pandas, LSTM, CNN
- **RAINFALL PREDICTION USING MACHINE LEARNING ([PROJECT](#)) Feb 2025 - Apr 2025**
 - Developed a predictive system using ML algorithms like Linear Regression, Random Forest, LSTM, and Decision Tree to predict rainfall based on historical weather data.
 - Tech Stack: Python, Linear Regression, Random Forest, LSTM and Decision Tree.

Education

Nalla Malla Reddy Engineering College

BTech in CSE(AIML)

August 2022 – May 2025

Hyderabad, Telangana

Government Model Residential Polytechnic, Gajwel

Diploma in Mechanical Engineering

May 2019 – August 2022

Hyderabad, Telangana

Certifications

Full stack developer in Upgrade | Python for Machine Learning | Data Analytics Essentials | Introduction to Artificial Intelligence | Auto Cadd design in Cadd center
